* Estimation and not contractual. Please contact your dealer for applicable price in your country. ** Accessories not set. Please ask your dealer.

All prices are given with French VAT tax. We reserve the right to make changes. Edition July 2021. Prices plus handover inspection and transfer charges.

The General Terms and Conditions of Fleurette Constructeur shall apply. No liability is accepted for printing errors and mistakes. Subject to technical changes. Vehicles are partly shown with optional extras, which do not correspond to the standard equipment (refer to article 2, clause 2 VO (EU) 1230/2012).

A purchase contract can only be concluded with your binding order and the order confirmation of your dealer. The water supply system at least corresponds to standards practices 07/2011 (Directive 2002/72/ EC).

Subject to changes in price, technical details, facilities and equipment, as well as design concept. The information about the scope of delivery, appearance and performance corresponds to the knowledge available at the time of printing. Deviations of +/- 5% are possible for dimensional and weight data, even in running order, and the technically permissible total mass.

As per art. 2, clause 4 a) VO (EU) 1230/2012, the mass in running order is, unless otherwise specified in the catalogue, in the price lists or in the technical specifications, or unless otherwise agreed upon with your seller, defined as: The vehicle mass with the standard equipment as per manufacturer's specifications incl. driver (75 kg), fuel tank filled up to 90 %, systems containing fluids filled up to 100 % (annexe V, clause 2.6, footnote (h) VO (EU) 1230/2012) as well as, if available, the trailer equipment, the mass of the spare wheel and of the tool.

Special equipment (additional equipment) and accessories increase the mass in running order and reduces the cargo load. Cargo load as per the catalogue specifications is defined as: Difference between the technically permissible total mass and the mass in running order. Refer to our prospectus or ask your dealer/seller for the weight of the special (additional) equipment and of the accessories.

The maximum permissible number of persons given is dependent on the weight and axle load. It can be reduced as a result of the installation of special equipment (additional equipment) and accessories, so that individual seats cannot be used in favour of load-carrying capacity. If all seats are supposed to be used, payload must be properly adjusted. The technically permissible total mass as well as the axle loads must not be exceeded.

The load-carrying capacity may be reduced as a result of the installation of special equipment (additional equipment) and accessories. The minimum cargo load must be adhered to at all times (refer to annexe I, clause 2.6.4.1.2 VO (EU) 1230/2012). The minimum cargo load is calculated as follows: Minimum cargo load in kg = (vehicle length in meters + maximum number of co-passengers + driver) x 10.

Moreover, the load-carrying capacity is not only dependent on the mass in running order, the actual vehicle mass (article 2, clause 6 VO (EU) 1230/2012), the weight of the accessories and the technically permissible total mass, but also on the respective axle loads. In order to utilise the maximum load-carrying capacity of the vehicle requires axle-dependent load distribution. This must be verified before commencing every journey. Even all other regulations necessary for the safe operation of the vehicle must be adhered to when using the vehicle.

Mass and weight data is specified in accordance with VO (EU) 1230/2012 unless deviating regulations are made in the catalogues, price lists or the technical data.
